What is **asthma & allergy friendly®** certification?

The **asthma & allergy friendly®** certification is a regulated, physician-led certification that accounts for the total installation (product and adhesive) and the ability of a product to be cleaned to minimize the number of allergens released into the environment. This certification helps to set a new standard, and offers consumers a guide for selecting flooring products based on their likelihood to create an allergic or asthmatic reaction.

Why is **asthma & allergy friendly®** certification important?

This 3rd party certification focuses solely on a product's impact to human health and not on areas of energy efficiency and environmental protection.

- Almost 20% of the world population is affected by asthma and allergies.
- Asthma is the leading cause of school absenteeism.
- Consumers are becoming focused on what is best for their health.

Tarkett is the only residential sheet vinyl manufacturer to have products certified **asthma & allergy friendly®**.
